

Fidelity CLO ETF

FIXED INCOME | HIGH YIELD

FACT SHEET MARCH 31, 2026

Symbol: FCLO • Intraday NAV Symbol: FCLO.IV • CUSIP: 31609A859

OBJECTIVE: Seeks to generate income.

STRATEGY: Normally investing at least 80% of assets in collateralized loan obligations (CLOs). Investing a majority of the fund's assets in CLOs rated from BBB+ to B- or the equivalent by at least one nationally recognized statistical ratings organization (NRSRO), or, if unrated, determined by the Adviser to be of comparable quality. Investing up to 30% of the fund's assets in CLOs rated above BBB+.

† Cumulative since fund inception, 2/10/26.

Current performance may be higher or lower than that quoted. Visit [i.fidelity.com](https://www.fidelity.com) or call your investment professional for most recent month-end performance. Performance data shown represents past performance and is no guarantee of future results. Investment return and principal value will fluctuate, so you may have a gain or loss when shares are sold.

Total returns are historical and include changes in share price and reinvestment of dividends and capital gains, if any.

Net Asset Value (NAV) Return represents the closing price of underlying securities at which the fund can create and redeem shares directly with the security. **Market Return** represents the price at which an investor can buy and sell a security in the secondary market. Since ETFs are bought and sold at prices set by the market—which can result in a premium or discount to NAV—the returns calculated using market price (market return) can differ from those calculated using NAV (NAV return).

Life of fund (LOF) returns are from fund inception to indicated month-end. Note that life of fund market returns are calculated using the first day the fund traded on an exchange, which may occur a few days after the NAV inception date. Market returns are based on the closing price on the listed exchange at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times.

* Fidelity Management & Research Company LLC (FMR) has contractually agreed to waive the fund's management fee. This arrangement will remain in effect through 1/31/27. FMR may not terminate this arrangement before the expiration date without the approval of the Board of Trustees and may extend it in its discretion after that date.

The Fund invests significantly in collateralized loan obligations (CLOs) which are associated with a number of risks including liquidity, interest-rate, credit, event, and call risk as well as the risk of default of the underlying assets. CLO tranches rated from BBB+ to B- are often subordinate to higher-rated tranches in terms of payment priority. Subordinated (i.e., mezzanine) CLO tranches are subject to higher credit risk and liquidity risk relative to more senior CLO tranches. The CLOs in which the fund invests are managed by investment advisers independent of the Adviser and may be subject to conflicts of interests, including managing the assets of other clients or other investment vehicles, or receiving fees that incentivize maximizing the yield, and indirectly the risk, of a CLO. Fixed income securities carry interest rate risk (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities.). Fixed income securities also carry inflation risk, liquidity risk, call risk and credit and default risks for both issuers and counterparties. Unlike individual bonds, most bond funds do not have a maturity date, so avoiding losses caused by price volatility by holding them until maturity is not possible. Lower-quality bonds can be more volatile and have greater risk of default than higher-quality bonds. Floating rate loans may not be fully collateralized and therefore may decline significantly in value. Foreign markets can be more volatile than the U.S. market due to increased risks of adverse issuer, political, regulatory, market, or economic developments and can perform differently from the U.S. market. Leverage can increase market exposure, magnify investment risks, and cause losses to be realized more quickly. Unlike certain ETFs, the fund may effect some or all creations and redemptions using cash, rather than in-kind securities. As a result, an investment in the fund may be less tax-efficient than an investment in an ETF that distributes portfolio securities entirely in-kind. The fund may have additional volatility because it can invest a significant portion of assets in securities of a small number of individual issuers. An ETF may trade at a premium or discount to its Net Asset Value (NAV).

Not NCUA or NCUSIF insured. May lose value. No credit union guarantee.

1. Top 10 holdings, portfolio diversification, and top 5 issuers may not be representative of the fund's current or future investments and may change at any time. Top 10 holdings do not include money market instruments and/or futures contracts. Any U.S. position includes cash and other assets. Depository receipts are normally combined with the underlying security. 2. As a percentage of total net assets. 3. Net Other Assets can include fund receivables, fund payables, and offsets to other derivative positions, as well as certain assets that do not fall into any of the portfolio composition categories. Depending on the extent to which the fund invests in derivatives and the number of positions that are held for future settlement, it can be a negative number. 4. Credit ratings for a rated issuer or security are categorized using Moody's Investors Service (Moody's). If Moody's does not publish a rating for a security or issuer, the Standard & Poor's Ratings Services (S&P) rating is used. When S&P and Moody's provide different ratings for the same issuer or security, the Moody's rating is used. Securities that are not rated by these Nationally Recognized Statistical Rating Organizations (NRSROs) (e.g., equity securities, if held) are categorized as Not Rated. All U.S. government securities are included in the U.S. Government category. The table information is based on the combined investments of the fund and its pro rata share of any investments in other Fidelity funds. 5. As a percentage of bond holdings.

DEFINITIONS AND IMPORTANT INFORMATION

30-Day SEC Yield is based on yield to maturity of a fund's investments and not on the dividends paid by the fund, which may differ. **Bloomberg U.S. Universal Bond Index** represents the union of the Bloomberg U.S. Aggregate Bond Index, the Bloomberg U.S. Corporate High Yield Bond Index, the Bloomberg 144A Bond Index, the Bloomberg Eurodollar Bond Index, the Bloomberg Emerging Markets Aggregate USD Bond Index, and the non-ERISA portion of the Bloomberg U.S. CMBS Index. Municipal debt, private placements, and non-dollar-denominated issues are excluded from the index. The only constituent of the index that includes floating rate debt is the Bloomberg Emerging Markets Aggregate USD Bond Index. **Duration** is a measure of a security's price sensitivity to changes in interest rates. Duration differs from maturity in that it considers a security's interest payments in addition to the amount of time until the security reaches maturity, and also takes into account certain maturity-shortening features (e.g., demand features, interest rate resets, and call options) when applicable. Securities with longer effective durations generally tend to be more sensitive to interest rate changes than securities with shorter effective durations. A fund with a longer average effective duration generally can be expected to be more sensitive to interest rate changes than a fund with a shorter average effective duration. **Gross Expense Ratio** is the total annual fund or class operating expense ratio from the most recent prospectus (before waivers or reimbursements) and generally is based on amounts incurred during the most recent fiscal year. **J.P. Morgan CLO High Quality Mezzanine Index** is designed to track the performance of broadly-syndicated, arbitrage US CLO debt from high-quality mezzanine tranches in the flagship J.P. Morgan CLO ("CLOIE") Index representing 90% BBBs and 10% BB/Bs. **Morningstar Averages** represent the average return of all funds within their respective fund investment category. The number of funds in each category periodically changes. Each Morningstar Average reflects the performance (excluding sales charges) of funds with similar objectives. **Net Expense Ratio** is the total annual fund or class operating expense ratio from the most recent prospectus, after any fee waiver and/or expense reimbursements that will reduce any fund operating expenses for no less than one year from the effective date of the fund's registration statement. This number does not include any fee waiver arrangement or expense reimbursement that may be terminated without agreement of the fund's board of trustees during the one-year period. **Turnover Rate** is the lesser of amounts of purchases or sales of long-term portfolio securities divided by the monthly average value of long-term securities owned by the fund. **Weighted Average Maturity** is the average maturity of the individual securities in the fund weighted in proportion to their dollar value. • It is not possible to invest directly in an index. All market indices are unmanaged. • Third-party trademarks and service marks are the property of their respective owners. All other trademarks and service marks are the property of FMR LLC or an affiliated company. • Information provided is unaudited.
